PROFESSIONAL SUMMARY

Software Engineer (Agentic AI Engineer) with 2+ years of experience building production-scale Generative AI and Agentic AI solutions. Skilled in LLMs, RAG, multi-agent systems, and AWS cloud-native architectures, with experience delivering scalable AI applications for enterprise use cases.

TECHNICAL SKILLS

Programming Languages: Python, C++, SQL

Libraries & Frameworks: Scikit-learn, TensorFlow, PyTorch, FastAPI, LangChain, LangGraph, CrewAI, OpenAI sdk Agents, AutoGen, Pydantic AI, Agno, Semantic Kernel, AWS Agentcore

Cloud & DevOps: AWS (Agentcore, Lambda, Bedrock, S3, SQS, EC2, ECR, RDS, OpenSearch, API Gateway, Secrets Manager, Parameter Store, K8s, Cloudwatch, ALB), Docker

Developer Tools: Claude code, Git, GitHub, VS Code, Jupyter Notebook, Power BI Desktop (Basic)

Focus Areas: Generative AI, Machine Learning, NLP, Data Science, Backend Engineering, MLOps

Soft Skills: Problem Solving, Leadership, Communication, Adaptability, Time Management

WORK EXPERIENCE

UsefulBI Corporation | Software Engineer II

Feb 2024 – Present

Bangalore, India (Onsite)

AgentVerse – Multi-Agent Pharmaceutical Intelligence Platform

Mar 2026 – Present

- Developed and deployed **AgentVerse**, a multi-agent pharmaceutical intelligence platform on **Amazon Bedrock AgentCore Runtime** using **Strands**, with an LLM-based router orchestrating domain-specialized agents for HIV, Pharmacovigilance, Medical Literature, and Clinical Guidelines.
- Engineered a custom **RAG pipeline** using **Titan v2 Embeddings**, **OpenSearch Hybrid Search (Vector + BM25)**, and **Claude Sonnet**, with custom chunking/retrieval; implemented **AgentCore Observability/OpenTelemetry + CloudWatch** for tracing and **AgentCore Evaluation** with curated golden datasets and RDS-backed application/feedback data for automated quality and regression evaluation.

Clinical Trial Document Automation Platform

Aug 2024 – Aug 2025

- Built a production GenAI platform for automated generation of ICF and PLPS clinical trial documents, supporting 100+ concurrent users.
- Designed a scalable AWS backend using FastAPI, Lambda, SQS, RDS, OpenSearch, Titan Embeddings, and Claude Sonnet; implemented metadata-scoped semantic retrieval using protocol-specific GS Number filtering.
- Developed an LLM-driven template workflow that generated question-level responses through parallel inference and assembled them into final clinical documents, reducing manual medical writing effort by 90%.

Conversion Rate Optimization

Feb 2024 – Aug 2024

- Built a classification model to predict trial users likely to convert to paid subscriptions using behavioral engagement features.
- Enabled targeted reminders, engagement nudges, and offers to improve trial-to-paid conversion.

PERSONAL PROJECTS

DebCode – Autonomous Coding Harness Agent [GitHub]

- Built an autonomous terminal coding agent using **Amazon Bedrock** and **Claude** that plans, edits, tests, and self-corrects code with 10 tools, supporting Python, Node.js, Rust, Go, and Java.

RecallAI – Memory-Augmented Web-Aware AI Assistant [GitHub] [Live Demo]

- Built an Agentic AI assistant using **Amazon Bedrock**, **MCP**, **multi-layer memory**, and **SearXNG** with serverless Cloudflare deployment and BYOK-based inference.

EDUCATION

National Institute of Technology Kurukshetra, Haryana

Oct 2021 – Jul 2024

Master of Computer Applications

CGPA: 8.7
